ONE

Operation

Safety Notices

The following safety instructions apply to all game operators and service personnel. Specific warnings and cautions will be found throughout this manual where they apply. We recommend that you read this page before preparing your game for play.

CAUTION

DANGER OF EXPLOSION IF BATTERY IS INCORRECTLY REPLACED. Replace only with the same or equivalent type recommended by the manufacturer. Dispose of used batteries according to the manufacturer's instructions.

AC POWER CONNECTION. Before connecting the game to the AC power source, verify that the "line voltage selection chart" jumper wires are installed correctly for the line voltage in your area. For details, refer to Section 3.

PROPERLY GROUND THE GAME. To avoid electrical shocks, do not plug in the game until it has been inspected and properly grounded. MIDWAY games should only be plugged into a grounded 3-wire outlet. Shocks will also result, if the control panel is not properly grounded! After servicing any parts on the panel, be sure that the ground wires are secure. Only then should you lock up the game.

DISCONNECT POWER DURING REPAIRS. To avoid electrical shock, disconnect the game from the AC power source before removing or repairing any part of the game.

USE THE PROPER FUSE. To avoid electrical shock, use the replacement fuse which is specified in the parts list for this game. The replacement fuse must match the original fuse in fuse type, voltage rating, and current rating.

MONITOR PRECAUTIONS. When removing or repairing the monitor, extra precautions must be taken to avoid electrical shock. High voltages may exist within the monitor circuitry and cathode ray tube (CRT) even after power has been disconnected. Do not touch internal parts of the monitor with your hands or metal objects! Always discharge the CRT by the following method: Attach one end of a large, well-insulated, 20-kv jumper to ground. Momentarily touch the free end of the grounded jumper to the anode by sliding it under the anode cap. Wait two minutes and discharge the anode again.

HANDLE FLUORESCENT TUBE AND CRT WITH CARE. If you drop a fluorescent tube or CRT and it breaks, it will implode! Shattered glass can fly eight feet or more from the implosion.

ATTENTION!

PROPERLY ATTACH ALL CONNECTORS. Make sure that the connectors on each printed circuit board (PCB) are properly connected. If the connectors do not slip on easily, do not force them. A reversed connector may damage your game and void the warranty. All connectors are keyed to fit specific pins on each board.

Setup Procedure

Game Location Requirements

Power: Domestic 115V @ 60 Hz, 15 Amps
Foreign 230V @ 50 Hz, 7 Amps
Japan 100V @ 50 Hz, 15 Amps

Dimensions (assembled): Width: 30"
Depth: 61"
Height: 67"

Temp.: 32° F to 100° F
(0° C to 38° C)

Humidity: Not to exceed 95% relative.

Weight: Pedestal (crated) 95 Lbs.
Game (crated) 395 Lbs.

Installation And Inspection

1. Remove all items from shipping containers and set them aside. Inspect the exterior of the cabinet for any signs of damage. Remove shipping cleats from the bottom of the cabinet. Remove pedestal mounting rails packed inside seat liner.
2. Remove keys from the taped coin return slot. Unlock and open the coin and cash box doors. (Leg levelers and spare parts are stored in the cash box).
3. Tilt or lay the cabinet down. Locate two threaded holes on the bottom of the cabinet and install one leg leveler (with its hex nut) in each hole.
4. Stand cabinet upright and make certain it is in a stable position. Level the cabinet.
5. Leg levelers come installed on the pedestal assembly and need only to be leveled before installing onto the cabinet assembly.

6. Attach mounting rails to cabinet base using four 1/4-20 hex-head bolts (see above diagram for proper placement). Do not tighten bolts completely, some movement is required in the mounting rails to align holes with pedestal assembly.
7. Place pedestal assembly on mounting rails. Align the holes and carefully pull the pedestal away. Hold mounting rails in position and tighten bolts inside cabinet.
8. Connect speaker wire from inside pedestal to cabinet. Attach pedestal assembly and bolt together using eight 1/4-20 tamper proof screws. Use the T27 wrench, included in the spare parts, to install these screws.
9. Remove rear door of cabinet. Inspect cabinet interior for any signs of damage. Check all major assemblies to assure that they are mounted securely.
10. Refer to the games Cabinet Wiring Diagram (section 3), and check to see that all cable connectors are correctly secured. **DO NOT FORCE CONNECTIONS.** Watch for damaged connectors and avoid making reversed connections.
11. Determine the value of your line voltage with a meter. Then, check the jumper wire to the main power supply transformer. Be sure it is jumpered to correspond to your local line voltage value. If necessary, change the jumper wire to the transformer in accordance with the Jumper Chart in Section Three.
12. Replace rear cabinet door and screw (lock) it securely. **NOTICE:** Tamper proof screws are included with the spare parts. These screws are optional and may be used to secure the rear door panel. The T20 wrench is used for the installation of these screws. Close and lock the front coin and cash box doors.
13. To attach line cord, the four Phillips-head screws that mount the line cord cover plate to the rear cabinet. Match the prongs on the plug with the holes in the receptacle and push line cord securely into place. Make sure cord aligns with the indentation of plate (indentation should point toward bottom of cabinet). Remount line cord cover plate. If desired, tamper resistant screws are provided to remount cover plate.
14. Connect the line cord to a grounded (3-terminal) AC wall outlet.
15. Switch ON the game using the ON/OFF switch located on the upper left top of the cabinet, to verify proper operation.

SERVICING

Always turn off power to game before servicing.

- **Control Panel**

Using the T27 wrench, remove four tamper proof screws from the monitor glass retaining bracket, and set bracket aside. Remove four tamper proof screws from under the control panel. Pull control panel out and disconnect the wiring. Before reinstalling the control panel, check for proper wire connections, including ground strap.

- **Seat**

Using the T27 tamper proof wrench, remove three screws from each side of the seat mounting plate. Lift the seat/mounting plate off the pedestal assembly and place the seat on its back, on a flat surface. The six bolts under the mounting plate can now be removed to replace the seat.

- **Seat Slide Assembly**

Using the T27 tamper proof wrench, remove three screws from each side of the seat mounting plate. Lift the seat/mounting plate off the pedestal assembly and set aside. Slide the seat assembly forward, and remove the two tamper proof torque screws from the wood panel on top of the pedestal assembly. Slide the seat back and remove the two front torque screws. Lift the wood panel out of the pedestal base and turn the unit over. Remove the four nuts holding the wood panel to the slide assembly. Place the wood panel aside and the slide assembly can be easily accessed.

- **Speakers**

Control Panel: Two speakers are located behind the control panel. Using the T27 wrench, remove four tamper proof screws from the monitor glass retaining bracket, and set bracket aside. Remove four tamper proof screws from under the control panel. Pull control panel out and disconnect the wiring. The speakers can now be accessed from the back of the control panel assembly.

Seat: One speaker is located under the seat. Slide the seat assembly forward. Using the T27 wrench remove the two tamper proof torque screws from the wood panel on top of the pedestal assembly. Slide the seat back and remove the two front torque screws. Lift seat assembly and set aside. The speaker can now be accessed from the inside of the pedestal assembly.

- **Viewing Glass**

Using the T27 wrench, remove four tamper proof screws holding the monitor glass retaining bracket, and set bracket aside. Carefully raise the glass from the bottom grooved edge and lift it clear of cabinet.

- **Monitor Bezel**

Using the T27 wrench, remove four tamper proof screws holding the monitor glass retaining bracket, and set bracket aside. Carefully raise the glass from the bottom edge and lift it clear of cabinet. Set it aside. The monitor bezel can now be removed by lifting it out of the grooved edge at the bottom.

- **Marquee Glass**
Remove five 1/4" hex-head wood screws holding the plastic strip above marquee glass. Set strip aside and carefully lift glass. Store glass carefully to prevent damage.
- **Fluorescent Light Assembly**
Remove five 1/4" hex-head wood screws holding the plastic strip above marquee glass. Set strip aside and carefully lift glass. Store glass carefully to prevent damage. Disconnect the fluorescent light assembly from its power cable. Remove the screws fastening the assembly to the cabinet and lift out the assembly.

WARNING

If a fluorescent tube drops and it breaks, it will implode!
Use care in handling.

- **Fluorescent Lamp**
Remove five 1/4" hex-head wood screws holding the plastic strip above marquee glass. Set strip aside and carefully lift glass. Store glass carefully to prevent damage. Remove the fluorescent lamp retainer brackets. Grasp the tube, give it a quarter turn and remove it from its socket. Carefully place a new tube into the socket and turn to reinstall.
- **Monitor**
We recommend that you read the WARNINGS section thoroughly before beginning this procedure.
Switch OFF power to the game. Remove the viewing glass and the monitor bezel. Completely disconnect the monitor from all of its cabling, including its chassis ground strap.
Remove the six flange nuts securing the monitors mounting flanges to its mounting panel. Pull the monitor carefully from the cabinet front.

CAUTION While removing the four flange nuts, firmly support the monitor from the front of the CRT so that it will not slip.

CAUTION The monitor DOES NOT contain an isolation transformer in its chassis. It is mounted instead in the Power Chassis Assembly locate on the floor of the Cabinet. When servicing the monitor on a test bench, YOU MUST ISOLATE THE MONITOR FROM THE LINE VOLTAGE WITH AN ISOLATION TRANSFORMER.

Game Features

Cruis'n USA is a one player game.

Starting Up

Switch ON power to the game. A "rug" pattern appears on the CRT screen. When the "rug" pattern ends, the screen shows a CPU Board map. Bad chips are indicated in red, good chips are in green. The software revision level is shown at the top of the screen.

NOTE: When an error is detected during Start-up Tests, game start-up does not progress, and an error message appears on the screen.

Insert the desired amount of coins or tokens.

Player Controls

- **Start Button (Green)**
The start button allows the player to begin game play.
- **Radio Button (Orange)**
The radio button allows the player to turn radio sounds on and off, and change stations.
- **View 1-Lo Rider Button (Red)**
View 1 drives the car from inside.
- **View 2-Cruis'n Button (White)**
View 2 drives the car from directly behind.
- **View 3-Sky Hi Button (Blue)**
View 3 drives the car from an aerial view.

Game Operation

The Cruis'n' USA Control Switches are located inside the coin door. These switches allow the operator to customize some features of the game.

CABINET SWITCHES

- The **SLAM TILT SWITCH** detects any forceful vibrations against the Coin Door. This eliminates pounding for free games. It is located on the inside of the coin door.
- The **ON/OFF SWITCH** is located on the top right side of the cabinet.

CONTROL SWITCHES

- The **TEST MODE SWITCH** activates the games Menu System. Press the Test Mode Switch to access the Main Menu. To exit the menu system, use the Volume Down Switch and select EXIT TO GAME OVER from the Main Menu, then press the Test Mode Switch or use the Service Credit Switch.
- The **VOLUME UP SWITCH** moves up through the menu selections or adjustment choices, and raises the sound level of the game when in game play.
- The **VOLUME DOWN SWITCH** moves down through the menu selections or adjustment choices, and lowers the sound level of the game when in game play.
- The **SERVICE CREDIT SWITCH** is a special feature switch that allots credit without affecting the game's bookkeeping total and is used to get out of a menu selection or return to the main menu.

Menu System Operation

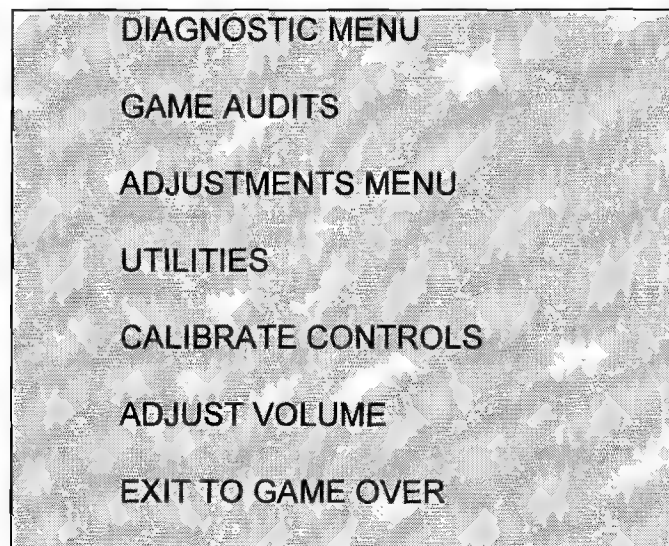

OPERATION

All CRUIS'N' USA Game Audits, Adjustments, and Diagnostics are options of the Main Menu. Each option, in turn, has its own menu, listing several choices that may be acted upon as desired.

Press the Test Mode Switch to activate the Main Menu (shown below). Game adjustments, bookkeeping, and diagnostics are all accessible from this menu.

Press the Volume Up Switch or Volume Down Switch to cycle through the menu options. Notice that the options are highlighted in sequence. Press Test Mode Switch to activate a highlighted option.

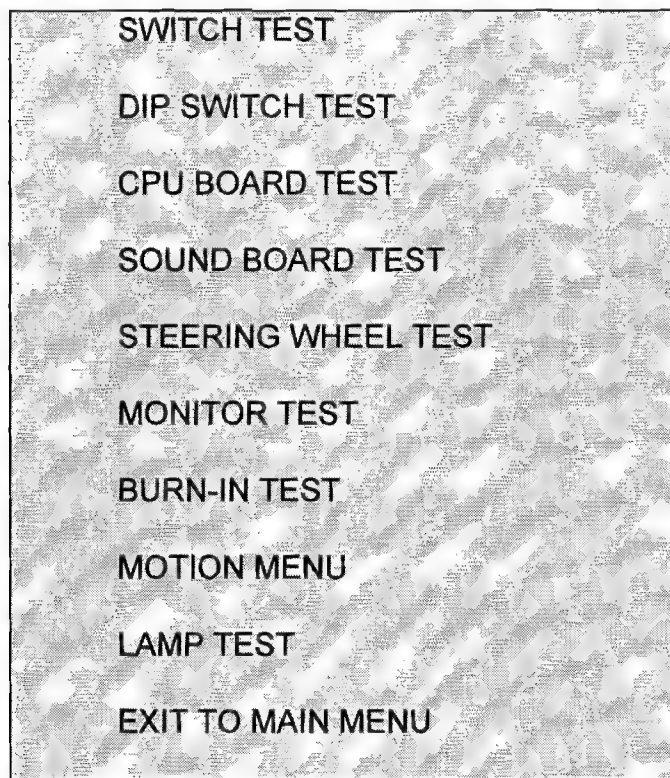

Note: Only highlighted options can be activated.

Main Test Menu

DIAGNOSTIC MENU

To enter the Diagnostic Menu from the Main Menu, press the Volume Up or Down Switch to highlight the option, then press the Test Mode Switch to activate. To exit the Diagnostic Menu, press the Volume Up or Down Switch to highlight EXIT TO MAIN MENU or press the Service Credit Switch.

Diagnostic Menu

Switch Test

The Switch Test allows the operator to test the switches on the control panel and the coin door.

Select the Switch Test by pressing the Volume Up or Down Switch to highlight the option; then press Test Mode Switch to activate. Pressing a switch on the control panel or coin door causes the corresponding switch location on the screen to light.

Press the Test Mode Switch to return to the Diagnostic Menu.

Dip Switch Test

The DIP Switch Test allows the operator to check the location of the two 8-position DIP switches on the CPU Board. The operator can also change the setting of each position of each DIP Switch during this mode.

To enter the test, press the Volume Up or Down Switch to highlight the DIP Switch Test; then, press the Test Mode Switch to activate. The screen displays a layout of their current settings.

To change a DIP Switch setting, move the switch to the desired setting, then check the screen to verify that the switch now shows the new setting.

Press Test Mode Switch to return to the Diagnostic Menu.

Note: Switches 1 thru 5 select country. Switches 6 & 7 select one of four modes in the country.

CPU Board Test

The CPU Board Test (much like the Start-up Test) allows the operator to check the RAMs and ROMs.

Highlight the CPU Board Test with the Volume Up or Down Switch; then, press the Test Mode Switch to activate. When this test is activated, a "rug" pattern appears on the screen. The screen then changes to show the layout of the RAMs and ROMs on the CPU. Any chip that is shown as gray with a white outline and should turn green during the CPU Test. During the test, chips are good if they turn green; they are faulty if they turn red.

Sound Board Test

The Sound Test allows listening to some of the sounds that Cruis'n' USA is capable of producing.

To enter the test, press the Volume Up or Down Switch to highlight the Sound Board Test; then, press the Test Mode Switch to activate.

Press the Volume Up Switch to change the music selection. Press the Volume Down Switch to trigger a sound effect. Press the Test Mode Switch to exit to the Diagnostic Menu.

Steering Wheel Test

The Steering Wheel Test allows the operator to check the left to right movement of the steering wheel.

Before proceeding, make sure hands and any other objects are clear of the steering wheel. Upon entering this test, the steering wheel will automatically turn to the left to begin the testing procedure.

Highlight the Steering Wheel Test with the Volume Up or Down Switch; then, press the Test Mode Switch to activate. The steering wheel turns to the left. Press the Test Mode Switch and it turns to the right. Press Test Mode Switch again to return to the Diagnostic Menu.

Monitor Patterns

The Monitor Patterns Test provides a menu for testing the monitor. Highlight the test with the Volume Up or Down Switch and activate with the Test Mode Switch. Continue pressing the Test Mode Switch to cycle through the test and automatically return to the Main Menu.

The **COLOR BARS** test fills the screen with several gradated colors to help with red, green and blue level adjustments. Each color should appear sharp and clear.

The **RED, GREEN, and BLUE SCREEN** tests fill the screen with either red, green or blue.

The **CROSSHATCH PATTERNS** test fills the screen with a grid and should be clear.

If any of the Monitor Pattern Tests shows a need for adjustment, use the proper white knobs on the Monitor Board.

Burn-In Test

The Burn-in Test continually repeats the CPU Board Test. Press the Volume Up or Down Switch to highlight the Burn-in Test; then, press the Test Mode Switch activate. When the Burn-in Test detects an error, the test stops and displays an error message on the screen. Use this test to find intermittent CPU problems.

To exit this test, switch the game OFF then ON again.

Motion Test (Not Used)

Lamp Test

The Lamp Test allows the operator to test the lamps on the control panel.

To enter the test, press the Volume Up or Down Switch to highlight the Lamp Test; then, press the Test Mode Switch to activate.

Press the Volume Up or Down Switch to highlight lamp selections, then press the Test Mode Switch to activate that lamp.

To exit, press the Volume Up or Down Switch to highlight EXIT TO MAIN MENU; then, press Test Mode Switch to activate, or press the Service Credits Switch.

GAME AUDITS

To enter Game Audits from the Main Menu, press the Volume Up or Down Switch to highlight the option; then, press the Test Mode Switch to activate. To advance to the next page of the Game Audit Table, press the Volume Up or Down Switch. Press the Test Mode Switch to exit.

The Game Audits Table records the game play statistics. The left side of the table names the Audit item; the right side shows the amount of play.

ADJUSTMENTS MENU

NOTE: Game Adjustments are explained in more detail on the following page.

Press the Volume Up or Down Switch to highlight the Adjustments Menu option on the Main Menu; then, press the Test Mode Switch to activate.

The Adjustments Menu option allows the owner/operator to change the Game Pricing and Game Difficulty.

The Adjustments Menu offers several options. Press the Volume Up or Down Switch to highlight an option; then, press the Test Mode Switch to activate. The activated item provides a setting choice. Press the Volume Up or Down Switch to change the current setting value. After an item has been changed a confirmation box appears. For example:

SELECT THIS PRICING? ARE YOU SURE?	
YES	NO

Press the Volume Up or Down Switch to YES or NO, then press the Test Mode Switch to lock in the new setting.

STANDARD PRICING
CUSTOM PRICING

EXIT TO MAIN MENU

Game Adjustment Menu

To exit the Adjustments Menu, press the Volume Up or Down Switch to highlight EXIT TO MAIN MENU; then, press Test Mode Switch to activate, or press the Service Credits Switch.

Standard Pricing

Standard Pricing allows the operator to choose any of the "Standard" selections for the Standard Pricing Table.

Custom Pricing

Custom Pricing allows the operator to install pricing other than that of the Standard Pricing Table. Custom Pricing also allows the operator to select the amount of credits required to start a game and the amount of credits required to continue a game. This option is adjusted from the Dip Switch Settings.

Free Play

This option selects free play. The setting choices for this adjustment are:

- Off (**factory setting**)
- On

First Place Awards Free Game

Awards a player a free game on 1st position. The setting choices for this adjustment are:

- On (**factory setting**)
- Off

Start Time Bonus Secs

This determines the initial time a player is given to finish a race. The setting range is:

- Maximum: 90
- Minimum: 60
- Factory Setting: 75**

Checkpoint Bonus Time Secs

This awards the player a time bonus for passing a checkpoint.

- Maximum: 10
- Minimum: 25
- Factory Setting: 20**

Attract-Mode Sound

This determines whether the game will make sounds in the attract mode. The settings for this adjustment are:

- On
- Off (**factory setting**)

High Score Entry

This determines whether the game will allow High Score Entry and Display Table. The setting choices are:

- On (**factory setting**)
- Off

Min Volume Level

This determines the minimum level allowed when setting the volume of the Sound Board. The setting range is:

- Maximum: 30
- Minimum: 0
- Factory Setting: 11

Speed in MPH or KPH

This determines speedometer setting in miles per hour or kilometers per hour.

- MPH (factory setting)
- KPH

Show Road Kill

This determines whether the game will show road kill. The settings are:

- On (factory setting)
- Off

Show President

This determines whether the game will show the president. The settings are:

- On (factory setting)
- Off

Show Girls

This determines whether the game will show girls. The settings are:

- On (factory setting)
- Off

High Score Reset

The number of games played before an automatic reset of High Score occurs. The setting range is 1000 to 25,000.

- Factory Setting: 5000

Game Difficulty

This allows the operator to select the difficulty level of the game. The setting range is::

- Easiest: 0
- Hardest: 9
- Factory Setting: 5

Max Credits

This determines the maximum credits allowed to begin a game. The setting range is:

- Maximum: 10
- Minimum: 30
- Factory Setting: 30

Wheel Sensitivity

This controls the responsiveness of the steering wheel. The setting range is:

- Maximum: 5
- Minimum: 1
- Factory Setting: 5

Coin Slot (1) Unit:

Coin Slot (2) Unit:

Coin Slot (3) Unit:

Coin Slot (4) Unit:

Coins inserted accumulate units. This adjustment specifies the number of units given for each coin in each chute (see "units/credit").

Bonus Units:

One bonus credit is awarded after this many coin units have accumulated.

Minimum Units:

No credits will be awarded until this many coin units have accumulated.

Units to Start:

Units needed for one credit.

Select Custom
Pricing:

When set to yes custom pricing is enabled.

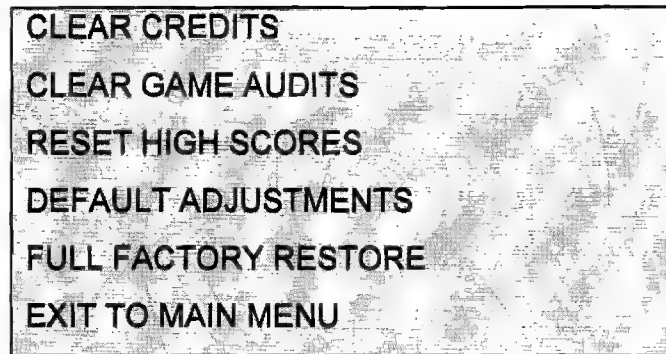

Show Fractions:

When set to yes, fractional credits will be seen on the credits screen.

UTILITIES

Press the Volume Up or Down Switch to highlight the Utilities option on the Main Menu; then, press the Test Mode Switch to activate.

The Utilities Menu allows the owner/operator to clear the games bookkeeping memory and to install a custom message.

Utilities Menu

Press the Volume Up or Down Switch to highlight an item from the Utilities Menu; then, press the Test Mode Switch to activate. After an item has been activated, you are given the option of resetting that item or not. For example:

Press the Volume Up or Down Switch to choose YES or NO, then press the Test Mode Switch to lock the choice and return to the Utilities Menu.

To exit the Utilities Menu, press the Volume Up or Down Switch to highlight EXIT TO MAIN MENU; then, press Test Mode Switch to activate selection or press the Service Credit Switch.

CALIBRATE CONTROLS

Press the Volume Up or Down Switch to highlight the Calibrate Controls option on the Main Menu; then, press the Test Mode Switch to activate.

Remove hands and feet from all controls. Set the steering wheel to the center position, then press the Test Mode Switch. Turn the steering wheel to the left-most position, then press the Test Mode Switch. Turn the steering wheel to the right-most position, then press the Test Mode Switch. Push the gas pedal to the maximum position, then press the Test Mode Switch. Push the brake pedal to the maximum position, then press the Test Mode Switch to complete the calibration and return to the Main Menu.

ADJUST VOLUME

Press the Volume Up or Down Switch to highlight the Adjust Volume option on the Main Menu; then, press the Test Mode Switch to activate.

Press the Volume Up Switch to increase, or the Volume Down Switch to decrease the sound level of the game. Press the Test Mode Switch to lock the volume level and return to the Main Menu.

Troubleshooting

PROBLEM

POSSIBLE SOLUTION

NO PICTURE OR DISTORTED PICTURE.

Check for faulty video board or monitor.
Check for disconnected video signal cable.

TURN GAME ON & NOTHING HAPPENS.

Check line fuse. Check for +5VDC at pins C, D, 3, and 4 of the JAMMA Connector.

NO SOUND.

Check the speaker and speaker connection to pins L and 10 on the JAMMA Connector. Check volume control setting. Check for +12VDC at pins F and 6 on the JAMMA Connector. Check inter-board wiring on CPU Board. Check sound fuses.

NO GENERAL ILLUMINATION.

Check the 1.0A., F.B. fuse located in the Power Chassis Assembly.

PRESS START BUTTON AND NOTHING HAPPENS.

Check for open wires between the button and CPU Board. Check for contamination on CPU Board pins or the button switch blade contacts. Check for proper ground.

NO CREDIT GIVEN WHEN COINS ARE INSERTED.

Check for contamination on coin switch contacts. Check for an open wire between Coin Switch 1 and pin 16 on the JAMMA Connector or Coin Switch 2 and pin T of the JAMMA Connector.

TOO MANY CREDITS FOR NUMBER OF COINS INSERTED.

Check Game Pricing setting. Check for a Short between pins T & 16 on the JAMMA Connector.

GAME STAYS IN THE TEST MODE.

Check that the Test Switch in the coin door and the Test Switch (Position 1) on DIP Switch 2 are set to Off.

5010-13366-00	R18, R28, R32, R118	Resistor, 470Ω, 1/8w, 5%			

The diagram illustrates a complex electronic circuit layout. Key components include:

- Resistors:** R1, R2, R3, R4, R5, R6
- Capacitors:** C1, C2, C3, C4, C5, C6, C7
- Diodes:** D1, D2, D3, D4, D5, D6
- Integrated Circuits:** U1, U2, U3, U4, U5, U6, U7, U8, U9
- Other Components:** LED1, AC, BR1, BR2, SR1, SR2, SR3, SR4

The layout features a central circular arrangement of components (C4, C5, C6, C7) and a large rectangular section at the bottom with horizontal lines. Various labels (P1-P6) indicate specific points or sections of the circuit.

FUSES

WARNINGS & NOTICES

Warning

USE OF NON-MIDWAY PARTS OR CIRCUIT MODIFICATIONS MAY CAUSE SERIOUS INJURY OR EQUIPMENT DAMAGE! USE ONLY MIDWAY AUTHORIZED PARTS.

- * For safety and reliability, substitute parts and modifications are not recommended.
- * Substitute parts or modifications may void FCC type acceptance.
- * This game is protected by Federal Copyright, trademark and patent laws. Unauthorized modifications may be illegal under Federal law. This also applies to MIDWAY logos, designs, publications and assemblies. Moreover, facsimiles of MIDWAY equipment (or any feature thereof) may be illegal under federal law, regardless of whether or not such facsimiles are manufactured with MIDWAY components.

Warning

This equipment generates, uses and can emit radio frequency energy and, if not installed properly and used according to the directions in this manual, may cause interference to radio communications. It has been tested and found to comply with the limits for a Class A computing device pursuant to Subpart J of part 15 of FCC rules which are designed to provide reasonable protection against such interference when operated in a commercial environment. Operation of this equipment in a residential area is likely to cause interference to radio communications, in which the user, at his or her own expense, will be required to take whatever measures may be needed to correct the interference.

Warning

Prevent shock hazard and assure proper game operation. Only plug this game into a properly grounded outlet. Do not use a cheater plug to defeat the power cord's grounding pin. Do not cut off the ground pin.

Notice

When MIDWAY ships a game, it is in compliance with FCC regulations. Your sticker is proof. If the sticker is missing or damaged, legal repercussions to the owner or distributor of the game may result. If your game does not contain an FCC sticker, call MIDWAY immediately.

Notice

No part of this publication may be reproduced by any mechanical, photographic, or electronic process, or in the form of a phonographic recording, nor may be transmitted, or otherwise copied for public or private use, without permission from the publisher.

For Service: Call your Authorized MIDWAY Distributor.
